Resampling methods

Aims of this module

- Solve to order statistics and sample quantiles Help
 - Derive sampling distributions and construct confidence intervals

 - See examples of Cls, that are **not** of the form $\hat{\theta} \pm \mathrm{se}(\hat{\theta})$ Learn solution of the form $\hat{\theta} \pm \mathrm{se}(\hat{\theta})$
 - See how to use computation to avoid mathematical derivations

Outline

Assignment Project Exam Help

Introduction

https://powcoder.com

Definition (recap)

Assignment Project Exam Help

 $X_{(1)} = \mathsf{Smallest}$ of the X_i

https://powcoder.com

 $X_{(n)} = \text{Largest of the } X_i$

· The Archied Weethat powcoder

$$X_{(1)} \leqslant X_{(2)} \leqslant \cdots \leqslant X_{(n)}$$

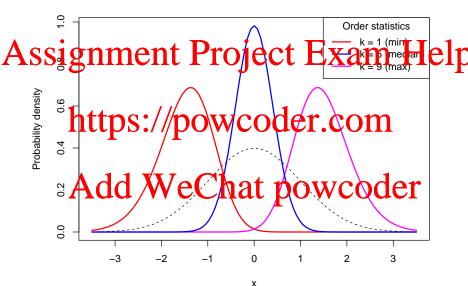

- $X_{(k)}$ is called the kth order statistic of the sample
- X₍₁₎ is the minimum or sample minimum
- ullet $X_{(n)}$ is the maximum or sample maximum $_{ ilde{6} ext{ of 50}}$

Motivating example

Assignment of the coefficients $X \sim N(0,1)$ of size n = 9 Exam Help

Simulated values:

Standard normal distribution, n = 9

Example (triangular distribution)

Assignment. $P_{0}^{X_{5}}$ with pdf f(x) = 2x, 0 < x Help

ullet Occurs if at least four of the X_i are less than 0.5,

hrtps://poweroderestonii)
Pr(exactly 4
$$X_i$$
's less than 0.5)

 $+\Pr(\mathbf{exactly} \ \mathbf{5} \ X_i)$'s less than 0.5)

• This is a binomial with 5 trials and probability of success given by

https://powcoder.com

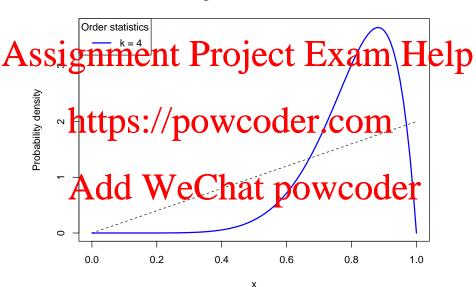

• More generally we have,

• Taking derivatives gives the pdf, $\frac{\text{pdf.}}{\text{powcoder.com}} g(x) = G'(x) = \binom{5}{4} 4(x^2)^3 (1-x^2)(2x)$

Add We€hat powcoder

since we know that $F(x) = x^2$.

Triangular distribution, n = 5

Distribution of $X_{(k)}$

Assignment Project Exam Help

• The cdf of $X_{(k)}$ is,

https://powcoder.com
$$= \sum_{i=k}^{n} \binom{n}{i} F(x)^{i} (1 - F(x))^{n-i}$$
Add WeChat powcoder

• Thus the pdf of $X_{(k)}$ is,

$$\mathbf{Assignment}_{t-1}^{g_k(x)} = \sum_{i=k}^{n} i \binom{n}{i} F(x)^{i-1} (1 - F(x))^{n-i} f(x)$$

$$\mathbf{Assignment}_{t-1}^{i-1} \mathbf{Project} \underbrace{\mathbf{Exam}}_{t-1} \mathbf{Help}$$

$$+ \sum_{i=k}^{n} (n-i) \binom{n}{i} F(x)^{i} (1 - F(x))^{n-i-1} (-f(x))$$

https://powcoder.com

Add
$$\overset{+}{\overset{\sum}{\text{Normal powcoder}}} i^{\binom{n}{i}} F(x)^{i-1} (1-F(x))^{n-i} f(x)$$

$$- \sum_{i=k}^{n} (n-i) \binom{n}{i} F(x)^{i} (1-F(x))^{n-i-1} f(x)$$

But

$$i\binom{n}{i} = \frac{n!}{(i-1)!(n-i)!} = n\binom{n-1}{i-1}$$

Assignment Project Exam Help $(n-i)\binom{n}{i} = \frac{1}{i!(n-i-1)!} = n\binom{n-1}{i}$

while the single power der.com

• For example, the first term of the first summation is,

• The first term of the second summation is, $\frac{n}{n} \frac{powcoder.com}{(n-k)\binom{n}{k}F(x)^k (1-F(x))^{n-k-1}} f(x)$

Add Wee Ehrat powcoder

These cancel, and similarly the other terms do as well.

• Hence, the pdf simplifies to,

$$\mathbf{Assignment} \Pr_{k}^{(n)} F(x)^{k-1} (1 - F(x))^{n-k} f(x)$$

$$\mathbf{Assignment} \Pr_{k}^{(n)} \mathbf{Exam} \mathbf{Help}$$

https://ghewcoder.com

Also:

Add We Chat powcoder
$$Pr(X_{(n)} \leq x) = F(x)^{n}$$

Alternative derivation of the pdf of $X_{(k)}$

$A \overset{\text{Heuristically,}}{\underset{(k)}{\text{Heuristically,}}} \underline{ent}_r \underbrace{Project}_{\underset{(k)}{\text{Exam}}} \underline{Exam}_{g_k} \underline{Help}$

- Need to observe X_i such that:

 - $\stackrel{\circ}{\circ} \underset{n-k}{\overset{k-1}{\text{are in}}} \stackrel{\text{in}}{(-\infty, x-\frac{1}{2}dy]} \\ \stackrel{\circ}{\circ} \underset{n-k}{\overset{\text{tips}}{\text{are in}}} \stackrel{\text{in}}{(x+\frac{1}{2}dy, \infty)} \\ \text{we coder.com}$
- Trinomial distribution (3 outcomes), event probabilities:

Add Wethat poweoder $\Pr(x - \frac{1}{2}dy < X_i \leqslant x + \frac{1}{2}dy) \approx f(x) dy$

$$\Pr(x - \frac{1}{2}dy < X_i \leqslant x + \frac{1}{2}dy) \approx f(x) dy$$
$$\Pr(X_i > x + \frac{1}{2}dy) \approx 1 - F(x)$$

• Putting these together,

https://powcoder.com

Example (boundary estimate)

Assignment Project Exam Help

$$\begin{array}{l} \mathbf{https} & \left(\frac{1}{\theta}\right)^4 & 0 \leqslant x_i \leqslant \theta, \quad i = 1, \dots, 4 \\ \mathbf{powe} & \mathbf{der} \cdot \mathbf{come} \\ i) \end{array}$$

- Maximised when θ is as small as possible, so $\hat{\theta} = \max(X_i) = X_{(4)}$ Now Add WeChat powcoder $g_4(x) = 4\left(\frac{x}{\theta}\right)^3\left(\frac{1}{\theta}\right) = \frac{4x^3}{\theta^4}, \quad 0 \leqslant x \leqslant \theta$

$$g_4(x) = 4\left(\frac{x}{\theta}\right)^3\left(\frac{1}{\theta}\right) = \frac{4x^3}{\theta^4}, \quad 0 \leqslant x \leqslant \theta$$

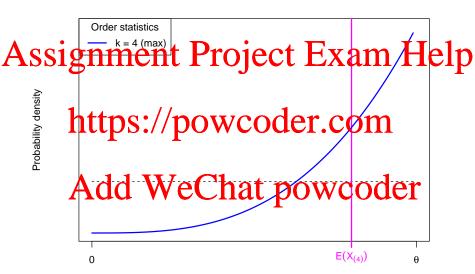

• Then,

$$\mathbb{E}(X_{(4)}) = \int_0^\theta x \frac{4x^3}{\theta^4} \, dx = \left[\frac{4x^5}{5\theta^4} \right]_0^\theta = \frac{4}{5}\theta$$

Assignment Project Exam Help

https://powcoder.com

Uniform distribution, n = 4

- Deriving a one-sided CI for θ based on $X_{(4)}$:
 - 1. For a given 0 < c < 1, show that,

3. Letting $c=\sqrt[4]{0.05}=0.47$, we have a 95% confidence interval from $x_{(4)}$ to $2.11x_{(4)}$

Quantiles

Definitions

Asymptotic distribution Chat powcoder Contribution Chat powcoder

Population quantiles

Informally, a quantile is a number that divides the range of a SSIGNIME INC. The quantile of a continuous probability distribution with

• The p-quantile, π_p , of a continuous probability distribution with cdf F has the property:

https://poweoder.com

So, we can define it by the inverse cdf:

• More general definition (also works for discrete variables): the

- More general definition (also works for discrete variables): the p-quantile is the smallest value π_p such that $p \leqslant F(\pi_p)$
- The most commonly used quantile is the median, $\pi_{0.5}$, often referred to simply as m
- Also the first and third quartiles, $\pi_{0.25}$ and $\pi_{0.75}$

Sample quantiles

'Type 1' quantiles

Assignment Project Exam Help

- The ceiling function, $\lceil b \rceil$, is the smallest integer not less than b In other parameters of the contract of the contract of the ceiling function, $\lceil b \rceil$, is the smallest integer not less than b

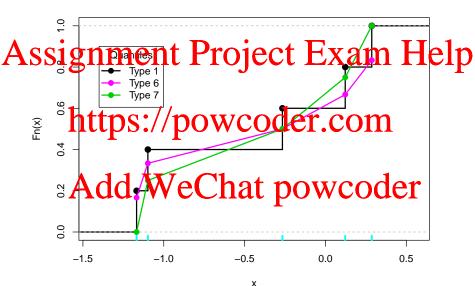

$$\hat{F}(x) = \frac{1}{n} \sum_{i=1}^{n} I(x_i \leqslant x)$$

Differences in definitions

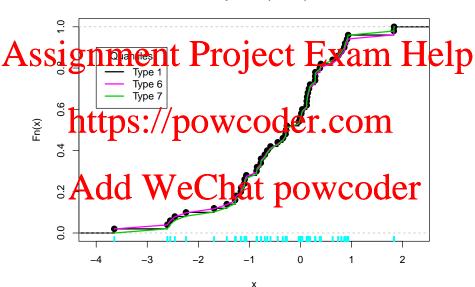

Assignment, different estimators for the cdf Help

https://powcoder.com

Sample cdf (n = 5)

Sample cdf (n = 50)

Distribution on the cdf scale

Assignment Project Exam Help

$$G(w) = \Pr(F(X) \leqslant w) = \Pr(X \leqslant F^{-1}(w)) = F(F^{-1}(w)) = w$$
 so that ps. //powcoder.com

$$g(w) = G'(w) = 1, \quad 0 \leqslant w \leqslant 1$$

so FAddnifWeChat powcoder

ullet Since F is non-decreasing, we have

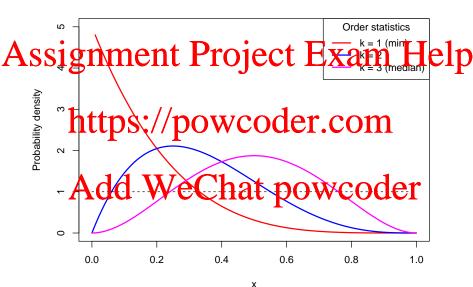

$$F(X_{(1)}) < F(X_{(2)}) < \dots < F(X_{(n)})$$

- So $W_i = F(X_{(i)})$ are order statistics from a $\mathrm{Unif}(0,1)$ distribution
- The cdf is G(w) = w, for 0 < w < 1
- ullet So the pdf of kth order statistic $W_k=F(X_{(k)})$ is

Assignment Project Exam Help

- This is a beta distribution wooder.com $F(X_k) \sim \operatorname{Beta}(k, n-k+1)$
- We can derive that We Chat powcoder $\mathbb{E}(W_k) = \frac{\mathbf{p}_k}{n+1}$ $\mathsf{mode}(W_k) = \frac{k-1}{n-1}$

Uniform distribution, n = 5

Defining the estimators

Assignment Project Exam Help

$$\Pr(X \leqslant X_{(k)}) = F(X_{(k)})$$

• Have $T(X_k)$ probability to the left π_p = $P(\pi_p) = p$ need p probability to the left π_p

• Just need to relate them

· F(XA) dd (We Glatherowcoder

We know its distribution, so can summarise it

• For example, $\mathbb{E}(F(X_{(k)})) = k/(n+1)$

• This suggests $X_{(k)}$ can be an estimator of π_p where p = k/(n+1)

• So, define $\hat{\pi}_p = X_{(k)}$ where p = k/(n+1)

• For other values of p, linearly interpolate $_{36\text{ of }50}^{50}$

Sample median

Assignment Project Exam Help $\hat{m} = \begin{cases} X_{((n+1)/2)} & \text{when } n \text{ is odd} \\ \frac{1}{2} \left(X_{(n/2)} + X_{((n/2)+1)} \right) & \text{when } n \text{ is even} \end{cases}$

• Confitte the most period Confitte Confitted (not type 1!)

Asymptotic distribution

whelattsps.m.//fpoweoder.com

• The median, $\hat{M}=\hat{\pi}_{0.5}$, is convenient special case,

Add Wechatapowcoder

Example (normal distribution)

Sanganments etimolect Exam Help

Already know,

 $\underset{\bullet}{\text{https://powcoder.com}} \text{https://powcoder.com}$

Add WeChatnowcoder

• Note that $m = \mu$ and,

$$f(m) = f(\mu) = \frac{1}{\sigma\sqrt{2\pi}}$$

• This gives,

$$\hat{M} \approx N\left(\mu, \frac{\pi}{2} \frac{\sigma^2}{n}\right)$$

Assignation Project Exam Help

- The sample mean, \bar{X} , is a more efficient estimator of μ than the
- sample median. \hat{M} / powcoder com

 In other senarios, it pan be the other way around

Confidence intervals for quantiles

- Assignment der statisfect Exam Help
 - Procedure is the 'inverse' of the sign test

https://powcoder.com

Example (CI for median)

Assignment Peroject Exam Help

- For the median to be between $X_{(1)}$ and $X_{(5)}$ must have at least one $X_i < m$ but not five $X_i < m$
- If the distribution senting to $X_i < m$, then $W \sim Bi(5, 0.5)$ and

$$\mathbf{Add} \overset{\Pr(X_{(1)} < m < X_{(5)}) = \Pr(1 \leqslant W \leqslant 4)}{\mathbf{Add}} \underbrace{\mathbf{WeCh}_{\underbrace{1}}^{\mathsf{pr}} (\underbrace{pow}_{\underbrace{2}})^{\mathsf{pr}} \underbrace{coder}_{\underbrace{1}}^{\mathsf{pr}})}_{15}$$

$$=1-0.5^5-0.5^5=\frac{15}{16}\approx 0.94$$

• So $(x_{(1)},x_{(5)})$ is a 94% confidence interval for m42 of 50

Confidence intervals for the median

 $\mathbf{A}\overset{\bullet}{\mathbf{s}}\overset{\mathsf{In}\text{-}\mathsf{general}, \text{ want } i \text{ and } j}{\mathbf{P}}\overset{j}{\mathbf{P}}\overset{\mathsf{o}}{\mathbf{O}}\overset{\mathsf{that},\bullet\mathsf{to}}{\mathbf{e}}\overset{\mathsf{the}}{\mathbf{C}}\overset{\mathsf{c}}{\mathbf{E}}\overset{\mathsf{p}}{\mathbf{X}}\overset{\mathsf{sible}}{\mathbf{e}}\overset{\mathsf{extent}}{\mathbf{H}}\overset{\mathsf{e}}{\mathbf{e}}\mathbf{l}}\mathbf{p}\\ \mathbf{P}\overset{\mathsf{e}}{\mathbf{F}}\overset{\mathsf{l}}{\mathbf{N}}\overset{\mathsf{e}}{\mathbf{N}}}\overset{\mathsf{e}}{\mathbf{N}}\overset{\mathsf{e}}$

$$https://po \overline{\overset{j-1}{\text{vec}}} \overset{(n)}{\text{der}} \overset{(\frac{1}{2})^k}{\text{eom}}^{\frac{1}{n-k}} ^{n-k}$$

- Need to use computed binomial probabilities (e.g. R) to determine
 i and j
- · Or use the demandable contraction to the contract of the con
- Note that these confidence intervals do not arise from pivots and cannot achieve 95% confidence exactly

Example (lengths of fish)

Assignment Project to Exam Help

Now,

$$\underset{r}{\text{https://powcoder}} \underbrace{/powcoder}_{(8)} \underbrace{-powcoder}_{(8)} \underbrace{-p$$

- In R:Add WeChat powcoder
 - + pbinom(1, size = 9, prob = 0.5)
 [1] 0.9609375
- So a 96.1% confidence interval for m is (19.0, 30.1)

Confidence intervals for arbitrary quantiles

Assignment and be extended to any quantile and any order statistics, a

$$\begin{array}{l} \mathbf{https://pewedder!} \\ \mathbf{https://pewedder!} \\ = \sum\limits_{j=1}^{n} \binom{n}{k} p^k (1-p)^{n-k} \\ \mathbf{Add WeChat powcoder} \end{array}$$

Example (income distribution)

- Incomes (in \$100's) for a sample of 27 people, in ascending order: \$\frac{\mathbf{S}}{\mathbf{S}}\frac{\mathbf{S}}{\mathbf{N}}\frac{\mathbf{N}}{\mathbf{N}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{S}}\frac{\mathbf{N}}{\mathbf{N}}\fra 222, 229, 241, 243, 256, 264, 291, 317, 376
 - Wait to estimate the first quartile Todier.com

- $W \sim \text{Bi}(27, 0.25) \approx N(\mu = 27/4 = 6.75, \sigma^2 = 81/16)$
- This gives

Assignment Project Exam Help $= \Pr(3.5 < W < 9.5) \quad \text{(continuity correction)}$ https://pow.coder/4com

= 0.815
