Statistics (MAST20005) & Elements of Statistics

Chat powerouser

School of Mathematics and Statistics University of Melbourne

Semester 2, 2022

### Aims of this module

- Assignment of regression that the property of the control of the c
  - Discuss correlation and how it relates to regression https://powcoder.com

### Outline

#### Introduction

## Assignment Project Exam Help

Point estimation of the mean

https://powcoder.com

# R Add WeChat powcoder

3 of 73 elationship to rogression

### Relationships between two variables

## Assismenitgledition for some simple scenarios Help

- comparing iid samples from two different distributions  $(X_i \ \& \ Y_j)$
- differences between paired measurements  $(X_i Y_i)$  https://powcoder.com

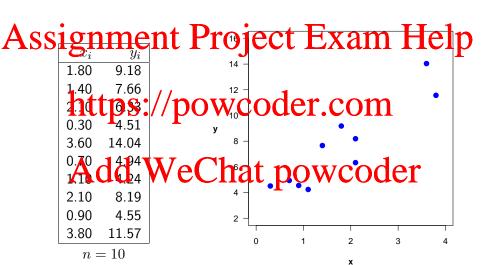

We now consider how to analyse bivariate data more generally, i.e.

two variables, X and Y, measured at the same time, i.e. as a pair.

The data of Wire Cathatts, powcoder

These can be visualised using a scatter plot.

### Example data

#### Outline

## Assignment Project Exam Help

Point estimation of the mean

https://powcoder.com

R Add WeChat powcoder

6 of 73 elationship to regression

### Regression

## Assignment Project Exam Help

In such a setting, we will assume that the X values are known and fixed (henceforth, x instead of X), and look at how Y varies given x.

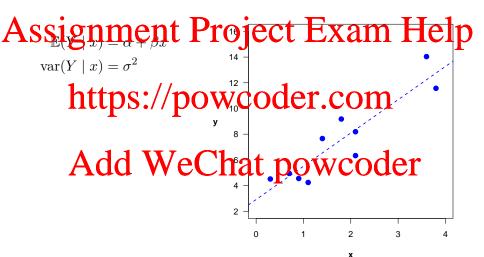

https://powcoder.com Example: Y is a students final mark for Statistics, and x is their mark for the prerequisite subject Probability. Does x help to predict Y?

### The regarded Weither aftiopoweoder(x).

The regression can take any form. We consider simple linear regression, which has the form of a **straight line**:

$$\mathbb{E}(Y \mid x) = \alpha + \beta x$$
 and  $\operatorname{var}(Y \mid x) = \sigma^2$ .

### Example: simple linear regression model

### Terminology

## Y is called a response variable. Can also be called an outcome or 1503 that depends in the Pp

- *x* is called a predictor variable. Can also be called an explanatory variable. Please do **not** call it an 'independent' variable.
- $\mu(x)$  | The state of the model equation.
- The parameters in the predictor function are called regression coefficients.d WeChat powcoder

### Why 'regression'?

# Assignment Project Exam Help Refers to the idea of 'regression to the mean':

if a variable is extreme on its first measurement, it will tend to be

First described by Sir Francis Galton when studying the inheritance of height between fathers and sons. In doing so, he invented the

technique of implementations and sons. In doing so, he invented the technique of implementation power of the power of the technique of the tec

### Linearity

# A regression model is called linear if it is linear in the coefficients. SSISNMENT Project Exam Help It doesn't have to define a straight line!

Complex and non-linear functions of x are allowed, as long as the resulting fridge functions When continuous function) of them, with the coefficients 'out the front'.

## For example, the following are linear models: Add Wechat-powcoder

$$\mu(x) = \frac{\alpha}{x} + \frac{\beta}{x^2}$$
$$\mu(x) = \alpha \sin x + \beta \log x$$

The following are NOT linear models:

Assignment 
$$\Pr_{\mu(x) = \alpha \sin(\beta x)}^{\mu(x) = \alpha \sin(\beta x)}$$
 Exam Help

... but the last one can be re-expressed as a linear model on a log scale (by taking logs of both sides),

### Add WeChat<sup>s</sup>powcoder

WeChat powcoder

Model checking

13 of 73 lationship to rogres

### Estimation goals

# Assignment Project Exam Help $\mathbb{E}(Y \mid x) = \alpha + \beta x$ and $\text{var}(Y \mid x) = \sigma^2$ .

- We wish to estimate the slope ( $\beta$ ) the intercept ( $\alpha$ ), the variance of the errors ( $\partial^2$ ), their standard errors and construct confidence intervals for these quantities.
- Often want to use the fitted model to make predictions about future of several and for a lewy. COCET
- Note: the  $Y_i$  are not iid. They are independent but have different means, since they depend on  $x_i$ .
- We have not (yet) assumed any specific distribution for Y, only a conditional mean and variance.

### Reparameterisation

# $A \underset{\mathsf{Let}}{\overset{\mathsf{Changing}}{\underbrace{\mathsf{on}}}} \underset{\alpha}{\overset{\mathsf{our}}{\underbrace{\mathsf{model}}}} \underset{\mathsf{gives:}}{\overset{\mathsf{slightly}}{\underbrace{\mathsf{Project}}}} Exam \ Help$

https://powcoder.com

Now our model is Weens Char powcoder

This will make calculations and proofs simpler.

### Least squares estimation

# Assignment Project Exam Help $H(\alpha_0,\beta) = \sum_{i} (y_i - \alpha_0 - \beta (x_i - \bar{x}))^2$

Solve https://thepaweroderseci@mero:

$$\overset{0}{\overset{=}{A}} \frac{\partial H(\alpha_0, \beta)}{\partial \partial \alpha} \overset{=}{\overset{=}{A}} \underbrace{\overset{\sum}{\sum}}_{i=1}^{n} [y_i - \alpha_0 - \beta(x_i - \bar{x})](-1)}_{n} \text{ hat powcoder}$$

$$0 = \frac{\partial H(\alpha_0, \beta)}{\partial \beta} = 2 \sum_{i=1}^{n} [y_i - \alpha_0 - \beta(x_i - \bar{x})](-(x_i - \bar{x}))$$

These are called the normal equations.

### Least squares estimators

# Assignment Project Exam Help $\hat{\alpha}_0 = \bar{Y}, \quad \hat{\beta} = \frac{\sum_{i=1}^n (x_i - \bar{x}) Y_i}{\sum_{i=1}^n (x_i - \bar{x})^2}.$

Anoth heter St. for powcoder.com

$$\hat{\beta} = \frac{\sum_{i=1}^{n} (x_i - \bar{x})(Y_i - \bar{Y})}{\sum_{i=1}^{n} (x_i - \bar{x})^2}.$$

 $\hat{\beta} = \frac{\sum_{i=1}^n (x_i - \bar{x})(Y_i - \bar{Y})}{\text{Nectorial powcoder}}.$  These are equivalent, due to the following result:

$$\sum (x_i - \bar{x})(Y_i - \bar{Y}) = \sum (x_i - \bar{x})Y_i.$$

Can also then get an estimator for  $\alpha$ :

$$\hat{\alpha} = \hat{\alpha}_0 - \hat{\beta}\bar{x}$$

## Assignment Project Exam Help And also an estimator for the predictor function,

https://powcom  
= 
$$\bar{Y} + \hat{\beta}(x - \bar{x})$$
.

### Ordinary least squares

This method is sometimes called ordinary least squares or OLS. Help Other variants of least squares estimation exist, with different names. For example, 'weighted least squares'.

https://powcoder.com

### Example: least squares estimates

# Assignment Project Exam Help

$$\bar{y} = 7.52 = \hat{\alpha}_0$$

https://powecoder.com

```
> rbind(y, x)
    [,1] [,2] [,3] [,4] [,5] [,6] [,7] [,8] [,9] [,10]
Assignments Project Exam Help
```

```
> model1 <- lm(y ~x)
```

> mod https://powcoder.com

#### Call:

# Add WeChat powcoder

X

(Intercept)

2.911 2.590

### Properties of these estimators

# Assignment Project Exam Help They are all linear combinations of the $Y_i$ ,

https://powder.com
$$Add \ We^{\hat{\beta} = \sum_{i=1}^{n} \left(\frac{x_i - \bar{x}}{K}\right) Y_i}$$
Add We Chat powcoder

where  $K = \sum_{i=1}^{n} (x_i - \bar{x})^2$ .

This allows us to easily calculate means and variances.

Means?

$$\mathbf{Assignment}^{\mathbb{E}(\hat{\alpha}_0) = \mathbb{E}(\bar{Y}) = \frac{1}{n} \sum_{i=1}^{n} \mathbb{E}(Y_i) = \frac{1}{n} \sum_{i=1}^{n} [\alpha_0 + \beta(x_i - \bar{x})] = \alpha_0}$$

$$\mathbf{Assignment}^{i} \mathbf{Proje\bar{c}t} \ \mathbf{Exam} \ \mathbf{Help}$$

$$\begin{split} \mathbb{E}(\hat{\beta}) &= \sum_{n=1}^{\infty} \frac{(x_i - \bar{x})}{N} \mathbb{E}(Y_i) = \frac{1}{K} \sum_{i=1}^{n} (x_i - \bar{x})(\alpha_0 + (x_i - \bar{x})\beta) \\ &= \frac{1}{K} \sum_{i=1}^{n} (x_i - \bar{x})\alpha_0 + \frac{K}{K}\beta = \beta \end{split}$$

This also makes,  $\mathbb{E}(x)$  each  $\mathbb{E}(x)$  power  $\mathbb{E}(x)$  power  $\mathbb{E}(x)$  and  $\mathbb{E}(x)$  that all of the estimators are unbiased.

Variances?

$$\begin{aligned} & \operatorname{var}(\hat{\beta}) = \operatorname{var}\left(\sum_{i=1}^{n} \frac{(x_{i} - \bar{x})}{K} Y_{i}\right) = \sum_{i=1}^{n} \left(\frac{x_{i} - \bar{x}}{K}\right)^{2} \operatorname{var}(Y_{i}) \\ & + \operatorname{powcoder.com} \\ & = \frac{1}{K^{2}} \sum_{i=1}^{n} (x_{i} - \bar{x})^{2} \operatorname{var}(Y_{i}) = \frac{1}{K^{2}} \sum_{i=1}^{n} (x_{i} - \bar{x})^{2} \sigma^{2} \\ & + \operatorname{Add}_{=} \underbrace{\sum_{i=1}^{n} \sum_{i=1}^{n} (x_{i} - \bar{x})^{2} \sigma^{2}}_{i=1} \\ & = \frac{\sigma^{2}}{K} \end{aligned}$$

Similarly,

Assignment, 
$$\Pr(\hat{\alpha}) = \left(\frac{1}{n} + \frac{\bar{x}^2}{K}\right) \sigma^2$$

 $\frac{\operatorname{var}(\hat{\mu}(x)) = \left(\frac{1}{n} + \frac{(x - \bar{x})^2}{K}\right)\sigma^2}{\text{https://powcoder.com}}$ 

Can we get their standard errors?

We need an estimate of  $\sigma^2$ .

### Assignment Project Exam Help

https://powcoder.com

### Analysis of variance: iid model

Assignment Project Exam Help  $\sum_{i=1}^{\text{For } X_i \sim \text{N}(\mu, \sigma^2) \text{ iid,}} (X_i - \mu)^2 = \sum_{i=1}^{\text{I}} (X_i - \bar{X})^2 + n(\bar{X} - \mu)^2$ 

https://powcoder.com

### Analysis of variance: regression model

# Assignment Project Exam Help $\sum_{(Y_i - \alpha_0 - \beta(x_i - \bar{x}))^2}$

$$= \underbrace{\text{littps://powcoder}_{\bar{x}}}_{i-1} com(x_i - \bar{x}))^2$$

$$= \sum_{n}^{\infty} (\mathbf{Y}_{n} - \hat{\mathbf{G}}_{n})^{2} + (\hat{\mathbf{G}}_{n} - \hat{\mathbf{G}}_{n})^{$$

$$= \sum_{i=0}^{n} (Y_i - \hat{\alpha}_0 - \hat{\beta}(x_i - \bar{x}))^2 + n(\hat{\alpha}_0 - \alpha_0)^2 + K(\hat{\beta} - \beta)^2$$

Note that the cross-terms disappear. Let's see...

# Assignment Project Exam Help $t_1 = 2\sum_{i=1}^{\infty} (Y_i - \hat{\alpha}_0 - \hat{\beta}(x_i - \bar{x}))(\hat{\alpha}_0 - \alpha_0)$

$$=2\sum_{i=1}(Y_{i}-\hat{lpha}_{0}-\hat{eta}(x_{i}-ar{x}))(\hat{lpha}_{0}-lpha_{0})$$

https://powcoder.com

Add We Chat powcoder

Since  $\sum_{i=1}^{n} (x_i - \bar{x}) = 0$  and  $\sum_{i=1}^{n} (Y_i - \hat{\alpha}_0) = \sum_{i=1}^{n} (Y_i - \bar{Y}) = 0$ , the first and third cross-terms are easily shown to be zero.

For the second term,

Assignment Project Exam Help
$$= \sum_{i=1}^{n} (Y_i - \bar{Y})(x_i - \bar{x}) - \hat{\beta} \sum_{i=1}^{n} (x_i - \bar{x})^2$$

$$+ \sum_{i=1}^{n} (Y_i - \bar{Y})(x_i - \bar{x}) - \hat{\beta} K$$

$$+ \sum_{i=1}^{n} (Y_i - \bar{Y})(x_i - \bar{x}) - \hat{\beta} K$$

Therefore, add cross-temcahat powcoder

### Back to the analysis of variance formula...

# Assignment Project Exam Help

## $htips: \sqrt[n]{powceder \cdot cem} - \beta)^2$

Taking expectations gives,

Add 
$$WeChat^2$$
 powcoder

where

$$D^{2} = \sum_{i=1}^{n} (Y_{i} - \hat{\alpha}_{0} - \hat{\beta}(x_{i} - \bar{x}))^{2}.$$

31 of 73

### Variance estimator

# Assignment Project Exam Help $\hat{\sigma}^2 = \frac{1}{n-2}D^2$ .

The inertipes for eproper Goder Complue,  $\hat{Y}_i = \hat{\alpha}_0 + \hat{\beta}(x_i - \bar{x})$ .

The devaluate constraint of t

The variance estimator is based on the sum of squared residuals,  $D^2 = \sum_{i=1}^n R_i^2$ .

Example: variance estimate

Assignment Project Exam Help

 $\hat{\sigma}^2 = 2.015$ 

https://poweoder.com

### Standard errors

# Assignment and beformulae for the standard deviation of the standard

For example,

https://powcoder.com

Add WeChat  $\stackrel{\Rightarrow}{\nabla}$  Decrease  $\stackrel{\hat{\sigma}}{\nabla}$  Decrease  $\stackrel{\hat{\sigma}{\nabla}$  Decrease  $\stackrel{\hat{\sigma}}{\nabla}$  Decrease  $\stackrel{\hat{\sigma}{\nabla}}$ 

### Example: standard errors

https://powcoder.com

$$se(\hat{\mu}(x)) = \hat{\sigma}\sqrt{\frac{1}{x} + \frac{(x - \bar{x})^2}{K}} = 1.42 \times \sqrt{\frac{1}{10} + \frac{(x - 1.78)^2}{1234}}$$
Add WeChat powcoder

#### Maximum likelihood estimation

## A SSI PROMINE IN CONTINUE CONTINUE INTERVALS. This requires further PLP

Let's assume a normal distribution:

https://poweoder.com

Alternative notation (commonly used for regression/linear models):

Add-WeChatepowcoder

Let's maximise the likelihood...

Since the  $Y_i$ 's are independent, the likelihood is:

$$\begin{array}{l} \mathbf{Assignment}^{L(\alpha,\beta,\sigma^2)} = \prod_{i=1}^{n} \frac{1}{\sqrt{2\mathbf{P}^2}} \exp\left\{-\frac{(y_i - \alpha - \beta x_i)^2}{2\mathbf{P}^2}\right\} \underbrace{\mathbf{Assignment}^2_{\mathbf{P}^2}\mathbf{Project}^2_{\mathbf{P}^2}\mathbf{xam}_{\mathbf{A}_0 - \beta(x_i - x))^2}}_{= \left(\frac{1}{\sqrt{2\pi\sigma^2}}\right) \exp\left\{-\frac{\sum_{i=1}^{n} (y_i - \alpha - \beta x_i)^2}{2\sigma^2}\right\} \mathbf{Project}^2_{\mathbf{P}^2} \mathbf{Project}^$$

 $-\ln L$ https://powecom $\bar{x}$ )

$$= \frac{n}{2}\ln(2\pi\sigma^2) + \frac{1}{2\sigma^2}H(\alpha_0, \beta)$$

The  $\alpha_0$  and  $\beta$  that maximise the likelihood (minimise the log-likelihood) are the same as those that minimise the sum of squares, H.

The OLS estimates are the same as the MLEs!

What about  $\sigma^2$ ?

Differentiate by  $\sigma$ , set to zero, solve...

### Assignment Project Exam Help

This is biased. Prefer to use the previous, unbiased estimator,

https://powcoder.com

Add WeChat powcoder

#### Sampling distributions

# Assignment Project Exam Help

Except for  $\hat{\sigma}^2$ , our estimators are linear combinations of the  $Y_i$  so will also have normal distributions, with meanand variance as previously derived LLDS./POWCOGET.COM

For example,

### Add WeChat powcoder

Moreover, we know  $\hat{\alpha}_0$  and  $\hat{\beta}$  are independent, because they are bivariate normal rvs with zero covariance.

Using the analysis of variance decomposition (from earlier), we can show that.

example,

https://p@wcoder.com

and

Add Wethat powcoder

This allows us to construct confidence intervals.

#### Example: confidence itervals

Assignment Project Exam Help  $\hat{\beta} \pm c \frac{\sigma}{\sqrt{K}} = 2.59 \pm 2.31 \times 0.404 = (1.66, 3.52)$ 

where https://pieweoder.com

A 95% CI for  $\mu(3)$  is:

ûAddeWellhatspowcoder

#### Deriving prediction intervals

# Assignment Project Exam Help

https://powcoder.com
$$Y^* - \hat{\mu}(x^*) \sim N\left(0, \left(1 + \frac{1}{n} + \frac{(x^* - \bar{x})^2}{K}\right)\sigma^2\right)$$
Add WeChat powcoder

A 95% PI for  $Y^*$  is given by:

$$\hat{\mu}(x^*) \pm c \,\hat{\sigma} \,\sqrt{1 + \frac{1}{n} + \frac{(x^* - \bar{x})^2}{K}}$$

#### Example: prediction interval

A 95% PI for  $Y^*$  corresponding to  $x^* = 3$  is: Exam Help  $10.68 \pm 2.31 \times 1.42 \times \sqrt{1 + \frac{1}{10} + \frac{(3 - 1.78)^2}{12.34}} = (7.06, 14.30)$ 

https://powcoder.com

Much wider than the corresponding CI, as we've seen previously.

Correlation

**Definitions** 

Point estimation

61 of Relationship to rogression

#### Correlation coefficient

# Assignment $\mathbb{R}^{Y}$ , the correlation coefficient, or simply roject Exam Help

$$\begin{array}{l} \rho = \rho_{XY} = \frac{\text{cov}(X,Y)}{\sqrt{\text{var}\,X\,\text{var}\,Y}} = \frac{\sigma_{XY}}{\sigma_X\sigma_Y} \\ \text{https://powcoder.com} \\ \text{s a qualitative measure of the strength of relationship, or} \end{array}$$

This is a qualitative measure of the strength of relationship, or association, between X and Y.

We will provide the state of pairs  $(X_i,Y_i)$ . Powcoder based on an iid sample of pairs  $(X_i,Y_i)$ .

Note: unlike in regression, X is now considered as a random variable.

## Assignment Project Exam Help

https://powcoder.com

#### Sample covariance

Assignment Project Exam Help  $S_{XY} = \frac{1}{n-1} \sum_{i=1}^{n} (X_i - \bar{X})(Y_i - \bar{Y}) = \frac{1}{n-1} \left( \sum_{i=1}^{n} X_i Y_i - n \bar{X} \bar{Y} \right)$  https://powcoder.com

You can check that this is unbiased,  $\mathbb{E}(S_{XY}) = \sigma_{XY} = \text{cov}(X, Y)$ .

### Add WeChat powcoder

#### Sample correlation coefficient

# Assignment of the sample correlation specificient (also known the particular of the

$$\begin{array}{l} R = R_{XY} = \frac{S_{XY}}{S_{X}} = \frac{\sum_{i=1}^{n} (X_{i} - \bar{X})(Y_{i} - \bar{Y})}{\sqrt{\sum_{i=1}^{n} (X_{i} - \bar{X})(Y_{i} - \bar{Y})}} \\ \text{https://powerder.} \end{array}$$

You can check that  $|R| \le 1$ , just like  $|\rho| \le 1$ .

This gives a point estimate of  $\rho$ .

Add We Chat powcoder

For further results, we make some more assumptions. . .

#### Bivariate normal

# Assume X and Y have correlation p and follows bivariate normal and the second project Exam Help

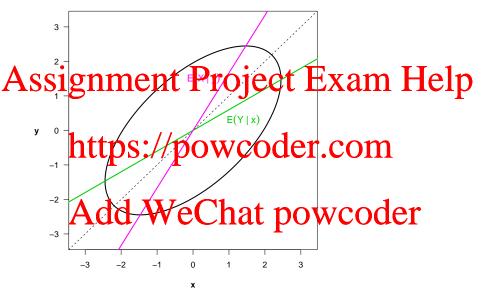

$$\begin{array}{c} http_{S://powcoder.com}^{\left[X\right]} \sim N_2\left(\left[\begin{matrix} \mu_X \\ \mu_Y \end{matrix}\right], \left[\begin{matrix} \sigma_X^2 & \rho\sigma_X\sigma_Y \\ \rho\sigma_X\sigma_Y & \sigma_Y^2 \end{matrix}\right]\right) \end{array}$$

In this case, the regressions are linear,

### Add WeChat powerder

$$\mathbb{E}(Y \mid X = x) = \mu_Y + \frac{\rho \sigma_Y}{\sigma_Y}(x - \mu_X) = \alpha + \beta x$$

Note:  $\beta' \neq 1/\beta$ 

#### Variance explained

Assignment Project Exam Help  $(Y_i - \bar{Y})^2 = \sum_{i=1}^{N} (Y_i - \hat{\alpha} - \hat{\beta}x_i)^2 + \hat{\beta}^2 \sum_{i=1}^{N} (x_i - \bar{x})^2$ 

$$\begin{array}{c} \mathbf{https:}/\mathbf{powcoder.com} \\ \mathbf{https:}/\mathbf{powcoder.com} \end{array}$$
 This implies that  $R^2$  is the proportion of the variation in  $Y$ 

This implies that  $\mathbb{R}^2$  is the proportion of the variation in Y 'explained' by x.

In this Ace of is Weet entatent powered et

#### Remarks

- - Also, the proportion of Y explained by x is the same as the proportion of X explained by y. Both dreequal to  $R^2$  which is a symmetric expression of both X and Y:
  - For more complex models, the coefficient of determination is more complicated: it needs to be calculated using all predictor variables together III Wellar powcoder

#### Approximate sampling distribution

# Assignment<sub>g</sub>(Project)Exam Help

This function has a standard name,  $g(r) = \operatorname{artanh}(r)$ , and so does it's inverse  $g^{-1}(r)$  than the function g(r) is also known as the Fisher transformation.

The following is a widely used approximation:

Add WeChat powcoder 
$$\mathbb{R}^{(R)} \approx \mathbb{N} \left(g(\rho), \frac{1}{n-3}\right)$$

We can use this to construct approximate confidence intervals.

#### Example: correlation

# Assignment Project Exam Help

$$r^2 = 0.84$$

### An aphttps://cipowicoder.com

$$(\tanh(0.819), \tanh(2.30)) = (0.67, 0.98)$$

```
> cor(x, y)
[1] 0.9148421
```

### Assignment Project Exam Help

```
> cor.test(x, y)
```

### Pearso https://powcoder.com

```
> model1 <- lm(y ~ x)
> summary(model1)
```
